stability, consistency, and convergence of numerical ... - stability is a matter of degree, and an unstable discretization is one for which the modulus of continuity of $l_1 h$ is very large. to illustrate the notion of instability, and to motivate the quantitative measure of stability we shall introduce below, we consider a simpler numerical problem than the discretization of a differential equation.

stability analysis with xflr5 - it does not give us any clue about the plane's stability it tells us nothing on the values and on the signs of c_m and c_l this is a necessary condition, but not sufficient : we need to know more on pitching and lifting coefficients thus, an adequate value for the tail volume is not a condition sufficient for stability
